

CASE STUDY:

Global Oil Refinery Organizations

Situation

Our clients have required annual turnarounds in addition to planned maintenance projects and capital expansions.

Issue

Focused coordination efforts have proven to be difficult and costly tasks for existing plant departments in terms of managing all three aspects of construction.

Need

Our clients required dedicated technical and administrative solutions to bridge the quality and management gaps between existing day to day operations and project management.

Solution

PPMG's Shared Resources division established a partnership with these clients to lend its experienced consultants for extended durations to augment its staff and provide focused management to turnarounds.
